

IO Beats DAO – Governance & Vote Power Framework v1.0 (Premium Edition)

Overview

IO Beats DAO is the decentralized governance backbone of the IOB ecosystem. It governs tokenomics, NFT yield allocation, and treasury management through the \$IOB token. The DAO operates across Ethereum, Base, Polygon, and BNB using a multi-space Snapshot structure that allows each community to vote on proposals relevant to its chain.

Voting Eligibility

Only Pro, Elite, and Genesis packages grant DAO access and voting rights. Each tier provides weighted governance power based on IOB holdings and bonus multipliers.

Voting Power Model

Vote Power = (IOB Held × 1.0) + (Tier Bonus). This model ensures fairness, inclusion, and anti-whale balance.

DAO Governance Parameters

Quorum: 25,000,000 IOB · Proposal Threshold: 2,500,000 IOB · Voting Delay: 1h · Voting Period: 48h · Approval Ratio: 51% FOR · Vote Cap: 3,000,000 IOB / wallet · Treasury Safe: 4-of-7 multisig · Voter Incentive: 0.5% DAO rewards per vote.

Multichain DAO Ecosystem

Each chain has its own Snapshot Space for domain-specific governance. Main DAO (Ethereum) – Core Governance. Treasury DAO (Base) – Fund Management. Base DAO –

DeFi / LP Strategies. Creator DAO (Polygon) – Artist and Community Proposals.

Governance Cycle

1. Proposal Creation on Snapshot. 2. 48-Hour Voting Period. 3. Approval (>51%). 4. Execution via Safe Multisig (4/7). 5. Verification via Dune Dashboard.

Benefits of Multi-Space DAO

Precision – Each space handles its own governance domain. Security – Multi-sig segmentation ensures safety. Inclusion – Cross-chain holders vote locally. Scalability – Parallel proposals for efficiency. Specialization – Treasury, Base, and Creator DAOs evolve independently.

DAO Roadmap 2025–2026

Q4 2025 – Genesis DAO Launch (Ethereum). Q1 2026 – Treasury DAO Deployment (Base). Q2 2026 – Creator DAO Activation (Polygon). Q3 2026 – DAO Rewards Program (Sablier).

Legal Disclaimer

DAO participation grants governance rights only, not financial ownership. All smart contracts are audited and executed transparently under multisig security. Governance parameters may be updated by majority on-chain vote.

Changelog

v1.0 – Initial governance framework release (October 2025). v1.1 – Planned update for DAO metrics integration (Q1 2026).
