

iO Beats DAO Analytics – Transparency Report v1.0

October 2025

iO Beats DAO Analytics is the data transparency hub powering the iO Beats Web3 ecosystem. It unites decentralized finance, digital art, and music innovation — creating a transparent, auditable, and data-driven environment for community members, investors, and creators. Our dashboards track multi-chain treasuries, NFT collections, staking pools, and yield vaults across Ethereum, Base, Polygon, BNB Chain, and Arbitrum. Each dataset is public, on-chain verifiable, and community auditable, bringing full transparency into: • DAO treasury inflows/outflows • Governance operations and fund allocations • NFT and royalty revenue • Staking and liquidity vault performance

Legal Disclosure

All content, analytics, and smart-contract data are provided for informational and transparency purposes only. Nothing herein constitutes financial advice. All iO Beats contracts are verified and audited, but users must always perform their own due diligence before interacting with on-chain assets.

DAO Disclaimer

The iO Beats DAO operates as a decentralized autonomous organization.

All decisions, fund allocations, and governance actions are collectively managed by the DAO community through on-chain voting and multisig validation.

iO Beats DAO has no central authority and functions as an open-source ecosystem maintained by its members.

Participation in DAO activities implies acknowledgment of the decentralized governance model and the associated risks of smart contracts and token volatility.
