

IOB Vesting & Lock Strategy v1.1

This document outlines the updated vesting and lock strategy for the IOB Token on Base. It replaces the legacy lock/vesting approach and integrates a multi-address vesting contract for presale participants, team, advisors, and community incentives.

Presale Allocation (2B IOB – 20% of Supply)

- Total: 2B IOB allocated for the presale round.
- Unsold Tokens: All unsold presale tokens will be permanently burned.
- Vesting Contract: Multi-address vesting contract with unlimited participants.
- Parameters:
 - Cliff: 1 month (no release).
 - TGE (Token Generation Event): 10% released after cliff.
 - Linear Vesting: 90% released evenly over the following 9 months.
- Duration: 10 months total vesting.

Team Allocation

- Cliff: 12 months.
- Linear Vesting: 24 months after cliff.
- Ensures long-term alignment and prevents early sell-off.

Advisors Allocation

- Cliff: 6 months.
- Linear Vesting: 12 months after cliff.
- Designed to reward strategic advisors while preventing short-term dumping.

Liquidity & Incentives

- Secured in the Safe multisig (66% of supply).
- Used for TaskOn incentives, marketing campaigns, community rewards, and liquidity support.
- Governed by 4/7 multisig signers to ensure transparency and accountability.

Operational Steps

1. Deploy the vesting contract (multi-address support).
2. Allocate 2B IOB from the Safe multisig into the vesting contract.
3. Configure presale vesting parameters (cliff, TGE, linear).

4. Import whitelist (from TaskOn/Galxe) into the vesting contract.
5. Assign allocations per investor.
6. Close presale and burn all unsold tokens.
7. Publish vesting schedule to community and investors.

Advantages for Investors & Community

- Transparent: All allocations and claims verifiable on-chain.
- Secure: Multi-address contract prevents misuse.
- Controlled Release: Prevents immediate dumps while allowing gradual liquidity.
- Deflationary: Burn of unsold tokens increases scarcity.
- Alignment: Long-term protection through cliffs and extended team vesting.

Conclusion

The IOB vesting & lock strategy v1.1 combines security, transparency, and investor protection. By securing presale tokens in a multi-address vesting contract, burning unsold supply, and applying long-term cliffs for team and advisors, IOB ensures a sustainable growth model for the Web3 ecosystem.
