

IO Beats – Treasury & Multichain Governance

Executive Summary – September 2025

■ Secure Multichain Architecture

The IO Beats Treasury Safe operates under a strict 4/7 multisig governance policy, deployed across Ethereum, Polygon, Base, BNB Chain, Arbitrum, and Optimism. This ensures institutional-grade security and transparency for treasury operations.

■ Nested Safes for Flexibility

A Parent Treasury Safe manages long-term custody, while a Marketing Safe (2/5 multisig) supports daily operations such as CEX listings, campaigns, and collaborations. Future plans include a Community Safe dedicated to DAO incentives and staking rewards.

■ Automation & Compliance

The Safe integrates modules like Gelato Automate, Transaction Builder, and Sablier/Superfluid for scheduled transfers, batch payouts, and streaming rewards. All financial operations are validated exclusively via on-chain multisignature approval.

■ Branding & Community – Beatsape

Beatsape, the official IO Beats mascot, anchors the NFT brand identity. Future initiatives include Beatsape DAO Pass NFTs, gamified QuestN/TaskOn campaigns, and short-form content to enhance engagement. A Buyback & Burn Safe will reinforce token value.

■ Strategic Priorities

1. Strengthening public transparency through dashboards and reports. 2. Increasing investor & partner confidence with compliance and buyback mechanisms. 3. Maximizing community loyalty via DAO participation, staking rewards, and gamification.

IO Beats merges DeFi-grade security with community-driven creativity. By reinforcing transparency, trust, and loyalty, IO Beats is positioning itself as the leading Web3 music ecosystem.
